

Closed-loop reverse control

Learned-dynamics MPPI vs. Fiala analytic-prior MPPI

● Learned ● Analytic prior

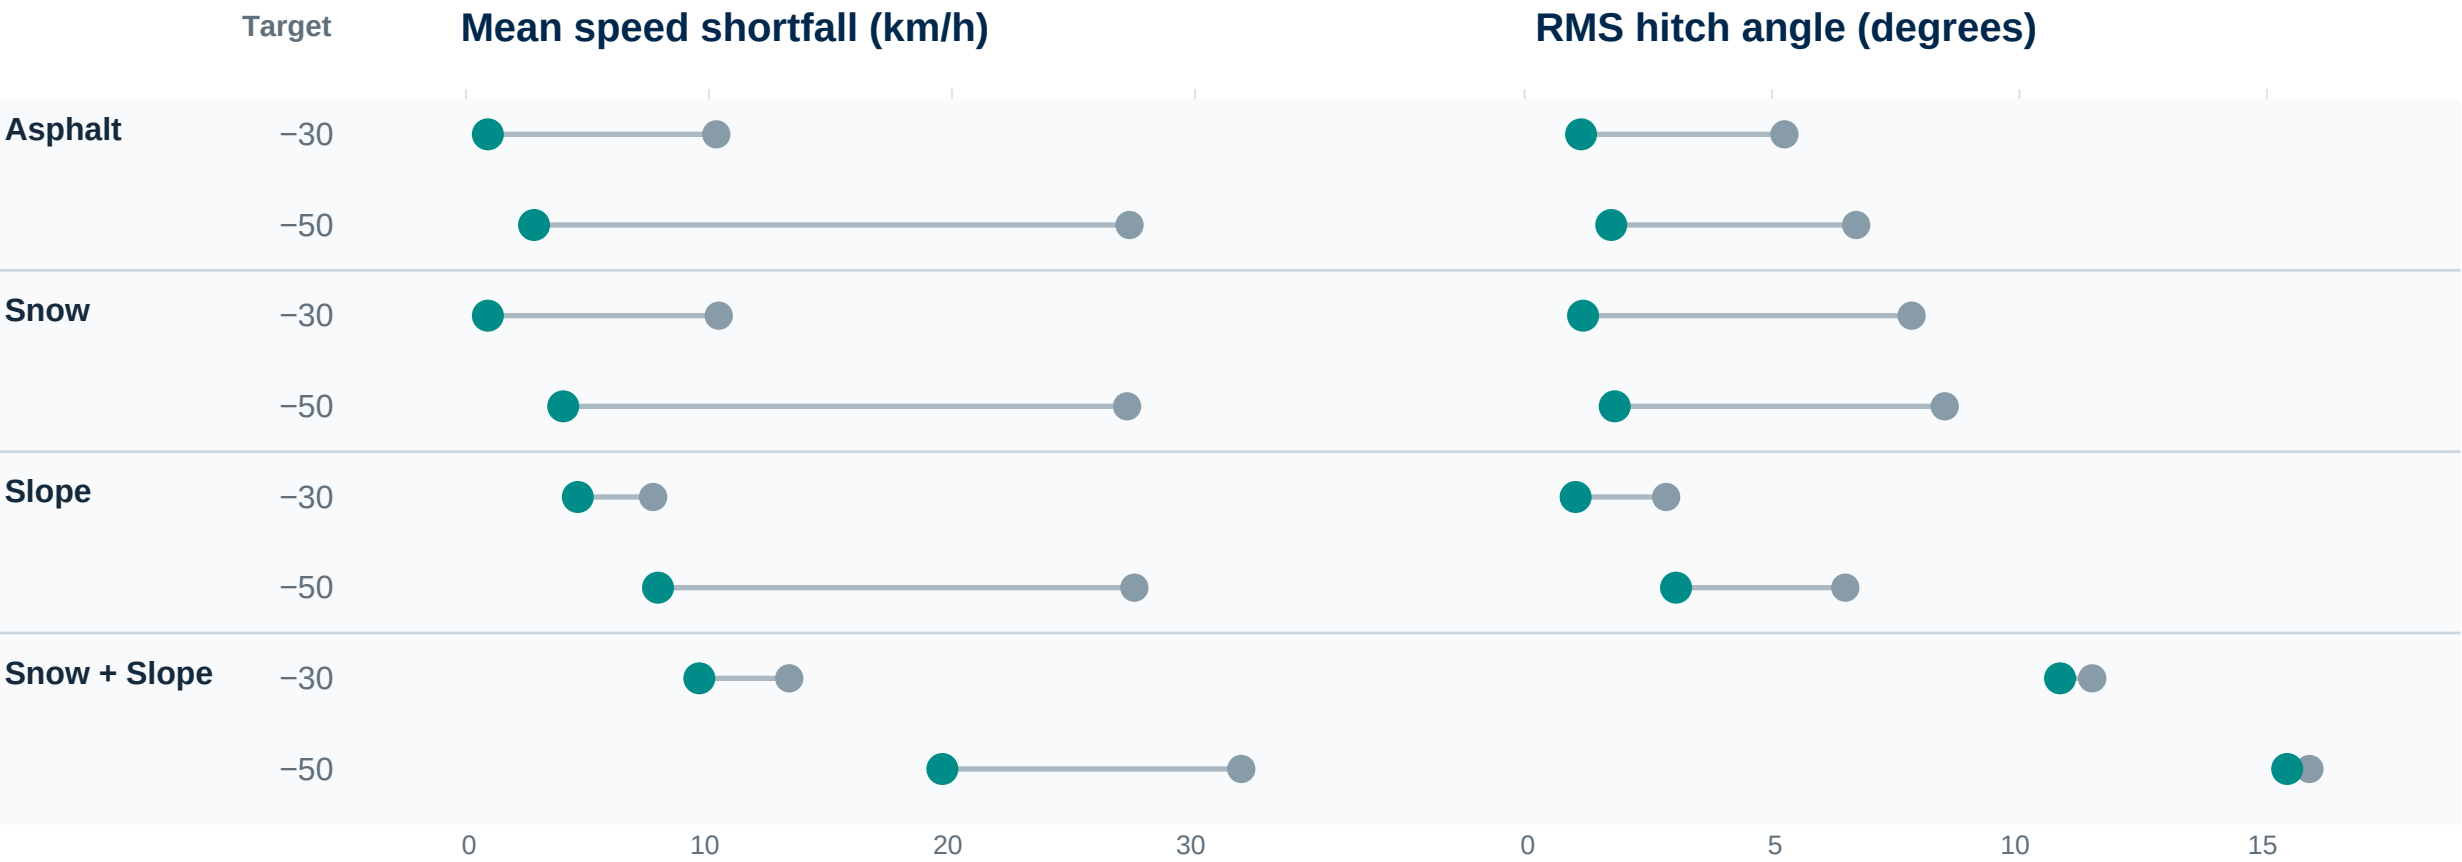

Runs completed

Two reverse targets per environment; 18 runs possible

Per-setpoint performance

Lower values are better; each marker averages all nine runs, including unsuccessful runs.

Completion: 62/72 learned vs. 41/72 prior reverse runs.

Shortfall = |target| – mean speed. Source: Table II.
